

ANGRY MOLES—SER Demo!

*Test your
reaction time!*

Demonstrates Sequence of Events Recording (SER)

- Brings SER Concept to Life
- Lively Competition for a Few Players...or a Large Group
- Custom Web Page Viewed With a Web Browser
- Game Tests Players' Reaction Times Within 1 ms

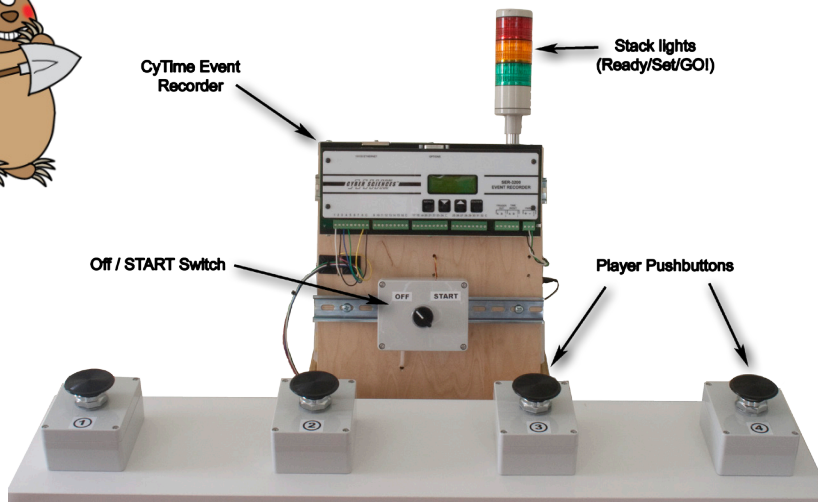

Angry Moles is a custom web page for the CyTime Event Recorder which demonstrates the concept of Sequence-of-Events-Recording. Players compete in a fast-action game in which the CyTime records players' reaction times to 1-ms resolution, and results are viewed with a standard web browser.

In response to the green "GO" light, players hit their pushbuttons as quickly as possible to register their scores. All reaction times are then displayed, as recorded by the CyTime, and the winner is the player with the fastest time. Best scores are saved for display at any time, allowing competition over many rounds.

But beware: Any player who "jumps the gun" will be disqualified (and his or her mole will look embarrassed).
