CYBER SCIENCES ANNOUNCES THE LAUNCH OF ITS NEW WEBSITE

Murfreesboro, Tennessee, USA — February 8, 2019. Cyber Sciences, Inc. announced today the launch of its newly redesigned website. The goal is to help customers learn more about how our solutions and services help them achieve reliable power for their critical power applications. The new website provides visitors an easier way to find the information they need quickly such as technical documents, firmware downloads, frequently asked questions, and in depth product data. It also allows us to keep our customers up to date on the latest product news.

In designing the website, we took care to make necessary changes while keeping some of the familiarity with the previous design. Existing users will notice that many of the menus and content are the same but are organized for easier access. Amongst the new features the website contains integrated social media buttons for LinkedIn and a “Stay Protected” signup area to foster improved communications with our customers. In addition, the “Recent News” page will serve as the reservoir for all recent and historical announcements.

Katesha Witherspoon, Cyber Sciences, Vice President of Sales and Marketing, stated, “We are excited about the launch of our new website and hope it delivers the improved customer experience it was intended to give. We provide our solutions globally and so we wanted to enable our customers, no matter where they are, to gain in depth knowledge about our products, learn more about the technology behind them and discover how precision time synchronization is key in designing for power reliability. In addition, we will continuously update our website content with the latest product news, company announcements and client success stories to keep our clients engaged.”

Cyber Sciences, Inc. (CSI) is a global leader in precision time solutions for commercial/industrial facilities, including data centers, hospitals, universities, microgrids and alternative energy. Key applications include sequence of events recording (SER) and GPS time synchronization, helping facility managers and engineers to ensure the reliability, efficiency and safety of their normal and emergency power systems. Cyber Sciences is a privately-held corporation located in Murfreesboro, Tennessee, 25 miles southeast of Nashville. For more information about CyTime Sequence of Events Recorders, please contact the company by phone at 1-615-890-6709, by email at sales@cyber-sciences.com or visit the company’s web site at www.cyber-sciences.com.
